TESTING OF YOUR SEED GRAIN

By Line Elevators Farm Service is supervised by highly trained experienced scientists.
Bring a five-ounce sample for free testing to your nearest A. P. Agent.

The Alberta Pacific Grain Co. (1945)

FIRE DESTROYS SERVICE STATION

Fire believed caused from a short circuit in the lighting plant destroyed Del's Service Station, 7 miles south of Carbon, on Saturday evening. All tools, lunch counter equipment and a sum of money were destroyed. Two cars were saved from the building.

There was no insurance.

ALBERTA FARMERS UNION

The annual meeting was held on Monday, Dec. 3rd, with only 20 members present. Now fellow farmers this is a very poor showing for this district and the farmers want crop insurance, parity prices, community pastures and better living conditions. These are only a few of the things we are working for but to get them, you must give us your support, so join now by contacting the delegate and attend the meetings.

A committee was appointed to investigate the fire insurance carried at the Carbon Locker. A report of the provincial convention was given by R. Garrett and H. Isaac. Election of officers were as follows: President, H. Garrett; vice-president, H. Isaac; secretary, C. Cave; treasurer, H. Church; directors, W. Van Loon, M. Hector, M. Saunders, A. Fuller and J. E. Ohlhauser.

A vote of thanks was given the 1945 officers for their splendid work during the year. Now is the time to organize while conditions are fair, not when they are poor as then it is too late. Next meeting will be held on Monday, Jan. 7th.

C. Cave, Sec.

Announcement

The Sacrament of the Lord's Supper will be observed in the United Church, Carbon, Sunday morning, December 16.

A.T.A. Sub-Local Organized

A meeting to organize an A.T.A. sub-local was held at the home of Mrs. W. F. Ross on December 8th.

E. Lambert was appointed president and Mrs. W. F. Ross secretary treasurer.

It was agreed that meetings be held monthly of which the teachers will be notified.

A panel discussion was led by Miss N. Schielke, "The Teaching of Music in Elementary Grades." This proved very interesting and beneficial to all present.

Lunch was served.

OFF THE RECORD

OTTAWA—It is said that some of the Nasl war criminals have claimed to be self-made men so what can be expected of them.

WEDDINGS

SNELL—JACOBS

A quiet ceremony was solemnized at the United Church Manse, Carbon, on Saturday, Dec. 8, at 3 o'clock, when Doris Opal, daughter of Mr. and Mrs. R. Jacobs of Hunsley, became the bride of Russell Willard, only son of Mr. and Mrs. James Snell, of Carbon.

Miss M. Jacobs, sister of the bride was bridesmaid and Mr. W. A. Gibson attended the groom. Rev. R. R. Hinchey officiated. The ceremony took place in the presence of a number of the bridal couples relatives and close friends.

Mr. and Mrs. Snell will reside north of Carbon.

Annual Meeting of Old Timers' Assoc.

The annual general meeting of the Carbon Old Timers' Association was held Saturday afternoon, December 8th at 3 p.m. The following officers were elected: President, C. L. Mancell; vice-president, F. J. Bessant; sec.-treas., W. A. Braisher; executive, C. L. Mancell, F. J. Bessant, W. A. Braisher, Jas. Gordon, Mrs. Van Loon, W. J. Poole, W. M. Douglas; auditors, S. F. Torrance and J. Atkinson, Sr.

It was decided to hold an Old Timers picnic and dance during the summer, the arrangements to be left in the hands of the executive. The auditors' report showed a balance on hand of \$170.84. A dance is being arranged for February 13th to consist of a limited program of new and old time dances, and the following committees were appointed: Posters, C. H. Nash and W. A. Braisher; lunch, Mrs. Van Loon; door, F. J. Bessant, S. F. Torrance, S. N. Wright Sr.; dance program, C. L. Mancell, W. M. Douglas; floor manager, James Gordon.

A vote of thanks was given to the secretary for his services during the past eleven years.

CARBON DEFEATED IN LEAGUE OPENER

Trochu defeated Carbon 5-1 in the first game of the Big Five Hockey League played in Carbon on Sunday afternoon. A fair crowd witnessed the game.

Fund Started for Fire Victims

Mr. C. Cressman has started a fund to assist Mr. and Mrs. Teitz who lost all their equipment in the service station fire on Saturday evening. A large number have already subscribed to this fund and your donation will be appreciated. Donations may be left with any business place.

Beneficial Effects Of Better Nutrition May Bring Greater Need For Agricultural Products

LOOKING down the road the broad vision discloses the possibility of an expanding demand for the products of agriculture and fisheries as the beneficial effects of improved nutrition become known and understood, Dr. P. F. Tisdell, Toronto, chairman of the Committee on Nutrition, Canadian Medical Association, told the Canadian Delegation to the United Nations Food and Agriculture Conference recently held at Quebec City.

An increased demand for essential products produced in Canada is therefore envisaged within Canada itself and also through the world, he said. Whichever way better feeding is considered, whether from the viewpoint of increased food production or from the standpoint of improved health it will pay handsomely. Dr. Tisdell reviewed some of the more important advance that recent studies have disclosed. A study made early in the war showed that when the rations of the armed forces were not of the best both from the quality and quantity standards that after four days men were so deteriorated mentally and physically that they were not a match for an army of 14-year-old properly fed boys.

The feeding of foods of high nutritive value definitely advances learning ability. It has been found that certain feeding procedures during acute illnesses can definitely shorten the period of convalescence.

Length of life is also affected by proper feeding, he said. Foods of high nutritive value not only retain vigour, but also lengthen the span of life.

The rate of growth of a man or woman is also affected by the amount of food. The recent survey made disclosed that freshmen presently at the University of Toronto were 1½ inches taller and 5½ pounds heavier on the average than the freshmen at the same university 20 years ago. The improvement in the freshmen of the present time over those of 20 years ago was probably due to better diet.

The Canadian Armed Forces during the war, and also now, had the highest ration of milk of any armed forces in the world—20 ounces per day and the advantage of a milk abundance evident.

Referring to the shipments of canned meats that are being sent from Canada to the devastated countries of Europe, Dr. Tisdell said calcium is needed as well as protein. It is not possible for the people in these countries to obtain cow milk which is high in calcium, in sufficient quantities so it must be supplied by something else, such as fresh bones. The human race thousands of years ago depended on bones to supply calcium for their diet. Today fresh bones are largely used in Canada for animal feed and for fertilizers. Fresh bones can be ground and added to canned meats and so substantially increase the calcium content. The introduction of bones in canned meat for human consumption will add vital elements to the diets of people and mean millions of dollars to farmers. Ordinary canned meats contain about 20 per cent. or more of protein and fresh bones with the meat adhered to them have about 16 per cent. protein in addition to their high calcium content.

The British Government recognizes the importance of nutrition for children. In Britain school lunches of nutritive foods are being provided to 33 per cent. of children and it is hoped shortly to provide such lunches to 75 per cent. of children attending schools throughout that country. The improved nutrition of the children is expected to be of far reaching value. Recently facilities have been provided for feeding an additional 7,000,000 industrial workers in the United States under government sponsorship at comparatively little cost. This will mean not only better health, but greater efficiency of the workers.

Dr. G. R. H. Barton, Deputy Minister, Dominion Department of Agriculture, who was head of the Canadian delegation at the FAO Conference said that the broad field of nutrition research throughout the world, with which Dr. Tisdell and Dr. Collip are actively identified in Canada, through discoveries which have already been made in this country alone indicate what such work can mean in terms of human welfare and in the additional demand for essential foods.

Served Their Purpose

Mock Airfields Drew More German Bombs Than Real Ones

A network of 500 dummy cities, airfields, highways and other targets so realistic they lured at night under enemy attack caused thousands of tons of German bombs to drop harmlessly into open fields during the Battle of Britain, the air ministry disclosed.

Mock airfields drew even more raids than the real ones—471 compared with 441 on actual installations. The fields appeared so genuine Allied pilots had to exercise great care to avoid trying to land on them.

"A conservative estimate credits the decoys with drawing five per cent. of all bombs, incendiaries and incendiary bombs dropped at night during the war," the ministry said.

ONLY LADY TEACHER ON SCHOOL CARS IN CANADA—Mrs. Helen Mackay of North Bay, Ont., will be out of a job one of these days and she won't mind a bit. The man who replaces her will be the man she replaced. Mrs. Mackay is the only woman school car teacher in Canada, replacing her husband who quit teaching in 1941. The railway car has all the comforts and Mrs. Mackay visits five settlements on rotation basis. Here she summons the class.

THE WHITE RACES

"White races are not really white," said P. J. Lewis, Assistant, Egan, Ltd., in the Merchant Navy, placed a letter addressed to his parents in a bottle, along with money for postage, and dropped it into Wallaroo Bay, South Australia. Last July 28 a small boy found the bottle—still in Wallaroo Bay—and promptly mailed the letter.

TOOK MANY YEARS

On July 28, 1917, the son of Mr. and Mrs. P. J. Lewis, Assistant, Egan, Ltd., in the Merchant Navy, placed a letter addressed to his parents in a bottle, along with money for postage, and dropped it into Wallaroo Bay, South Australia. Last July 28 a small boy found the bottle—still in Wallaroo Bay—and promptly mailed the letter.

Meat Ready For Shipment

Shipments of meat from the port of Montreal have reached an all time high for any North American port as almost all refrigerated boats on the Atlantic ocean have been loaned to the Great Britain to Montreal run to meet the urgent need of the United Kingdom in Europe for food during the coming winter. The top picture shows dock trucks loaded with frozen pork ready to be hauled into the S.S. Marquises. The bottom picture shows a load of frozen beef being lifted on the S.S. Salacia.

British Scientists Discovered That Germany Intended To Launch Rocket Missiles At U.S.

(E. C. Shephard, London Sunday Times)

GERMAN assurances that Germany intended launching rocket missiles against the United States and Canada have now been examined by British scientists having full access to German sources of information. They have concluded that the Germans could send a winged rocket 3,000 miles only if they had been free to continue the development work. Apparently the process was so wasteful it would have severely limited the scale of such attacks.

The Reason Why

Horses Lose Their Coats In Winter Weather

A newspaper has been asking how it is that, while we put on overcoats for the winter we strip the horse by clipping its hair.

The answer is that the animal's heavy coat is Nature's provision for winter in a state of shelterless freedom. When wild or at liberty horses do not constantly exert themselves by galloping; their grazing habits make it necessary for them to move slowly. Moreover, they have to be in the open so the heavy covering which the horse grows in autumn is essential to health and comfort.

When horses are set to work, however, their efforts make them hot, and if they were blanketed in a great mass of hair they would sweat intolerably, and then, having to stand still for long intervals, would run the risk of severe chills before their coats dried. So we clip their coats for their comfort while they are working.

When they are standing in the open in harness, and at night, their blankets to take the place of Nature's protective covering. Thus the horse is prevented from overheating when at work and safeguarded against cold when at rest.

EASY TO ANSWER

A poem submitted to a Boston firm was entitled "Why Do I Live?" It was returned with note reading, "We regret we cannot use your poem. But we can answer your question. It is because you milled the poem to us in order of delivering it in person."

The cost of fuel for this fast trip between England and America would necessarily be high. The commercial prospects of rocket-driven warships are not bright because of the high rate at which fuel must be consumed. Rocket flight at the present state of development is forced to use great quantities of fuel.

If less bulky or more efficient fuels can be found, an alternative method of covering long distances would be possible. This would involve a climb to a comparatively low level—possibly about 18 miles above the earth—where air resistance is small and level flight, of 1,500 miles or more, can be maintained on a much smaller amount of rocket thrust. The application of atomic energy to this purpose, if possible, would make the rocket the final power position.

The scheme was hit upon after a survey indicated that it would take an daily trains of fifty cars each ten years to cart all of the rubble out of the city. Hence this was impossible, the only alternative was to leave the rubble in the city.

The process of sorting this trash has been going on steadily for six months. Bricks are scraped and stacked and used for new construction. Cinders and other metal pieces are salvaged for scrap, forming the main source of raw material for the Berlin metal industry. Whatever cannot be used will be dumped in the Tegel area under the proposed plan.

It would cost \$5,000,000,000 to build Berlin completely. Allied sources estimate. Out of 1,500,000 family dwelling units in existence in 1939, only 300,000 orders will be left by the summer of 1944. Of the rest, 400,000 had been totally destroyed and 800,000 had been further destroyed during subsequent air raids and in the Battle of Berlin—New York Tribune.

It is to these women that a major share of the credit for the success of the Tegel rubble sorting system belongs—Winifred Star.

Did Grand Job

Nurses Working In Blood Clinics Served Long Hours

Now that the terrible urgency of blood donations has ended, it should be paid to a group whose service has been too lightly regarded. In the clinics where nurses, both professional and volunteer, who endured wearing hours of long hours to build up the banks of life-giving fluid. They went about their work quietly, cheerfully and with efficiency, so unobtrusively that they have been too often overlooked.

It is to these women that a major share of the credit for the success of the Tegel rubble sorting system belongs—Winifred Star.

EXPORT TRADE HIGH

Canada's total export trade to the British West Indies which was around \$14,000,000 in the pre-war years, dropped during the war years to \$4,000,000.

Native of the Gilbert Islands use coconut shavers to make their war armor.

Winnipeg, Manitoba
More About Extension

Education, including so-called extension, is a function of provincial governments. Agricultural experimentation and research is mostly in Dominion Government hands. It is necessary to assume, at present, that the administrative features of agricultural services will not change materially. It might be advantageous to combine the extension service of universities and provincial departments of agriculture. There are many arguments for placing experimental farms under a provincial administration with headquarters at the provincial university. On the other hand, there is much to be said for an expansion of extension and educational services through channels of the Dominion Department of Agriculture. The possibility of any such radical measure, even if they are desirable, is remote.

Two ways, at least, of improvement are open to us under the existing setup. One is the expansion and improvement of present service, and the other is the co-ordination of services both within and between provinces.

The absence of a direct administrative connection between research and experimental institutions, especially Dominion Government and universities, chiefly provincial, and the extension services, chiefly provincial, is a serious weakness. As a result, many Dominion Government experimentalists have, often in spite of themselves, been successful extension workers. We suggest that provincial extension services should engage specialists in plant diseases, soil science, etc., to work with and through the agricultural representatives.

Our second proposal is to the effect that annual or semi-annual Prairie Provinces extension conferences should be held, so that workers might benefit from an interchange of ideas and that our left hand may know what our right hand is doing.

Old Archie says—

If we were running an 'I Saw' column, we might report that: I saw Dnsy Poxon getting the cold shoulder after inviting one of the fair sex for a 'soda' on Monday evening.

Jim Hunt carefully looking the truck in to the Red and White yard, thinking perhaps of another incident when his thing wasn't so good.

Earl Lambert and John Todd assisting at the Ladies' Aid tea and bazaar.

Bill Ross still driving an "air conditioned" car.

Harold Greenlee going to work at 9:30 Wednesday.

W. A. Braisher busy quoting insurance rates since the fire on Saturday evening, but what's the use, there is no such column in this newspaper so we may as well quit dreaming and get some work done.
